joint work with Matthew Kennedy

 $1 \in S = S^* \subset C(X)$ is a function system. $K = \{\varphi \in S^* : \varphi \ge 0, \ \varphi(1) = 1\}$ state space, compact, convex, and $x \in X \longrightarrow \varepsilon_x \in K$, where $\varepsilon_x(f) = f(x)$ for $f \in S$. CHOQUET THEORY APPROXIMATION THEORY HYPERRIGIDITY DILATION ORDER APPLICATIONS

 $1 \in S = S^* \subset C(X)$ is a function system. $K = \{\varphi \in S^* : \varphi \ge 0, \ \varphi(1) = 1\}$ state space, compact, convex, and $x \in X \longrightarrow \varepsilon_x \in K$, where $\varepsilon_x(f) = f(x)$ for $f \in S$.

THEOREM (KADISON 1951)

 $\mathcal{S} \xrightarrow{\text{iso}} \mathcal{A}(\mathcal{K}) \subset \operatorname{C}(\mathcal{K})$ isometric isomorphism to affine functions.

 $1 \in S = S^* \subset C(X)$ is a function system. $K = \{\varphi \in S^* : \varphi \ge 0, \ \varphi(1) = 1\}$ state space, compact, convex, and $x \in X \longrightarrow \varepsilon_x \in K$, where $\varepsilon_x(f) = f(x)$ for $f \in S$.

THEOREM (KADISON 1951)

 $\mathcal{S} \xrightarrow{iso} \mathcal{A}(\mathcal{K}) \subset \mathrm{C}(\mathcal{K})$ isometric isomorphism to affine functions.

 $\partial S := \partial K$ extreme points is Choquet boundary of S. $f \in S$ affine on K, so $S \longrightarrow C(\overline{\partial K})$ completely isometric. $\overline{\partial K}$ is the Shilov boundary of S.

By Hahn-Banach and Riesz Representation Theorems, for $\varphi \in K$ there exists $\mu \in M_+(\overline{\partial K})$ representing measure $\varphi(f) = \int f d\mu$ for $f \in S$.

æ

CHOQUET THEORY APPROXIMATION THEORY HYPERRIGIDITY DILATION ORDER APPLICATIONS

By Hahn-Banach and Riesz Representation Theorems, for $\varphi \in K$ there exists $\mu \in M_+(\overline{\partial K})$ representing measure $\varphi(f) = \int f d\mu$ for $f \in S$.

Choquet theory yields $\mu \in M_+(\partial K)$.

- important in applications
- nonmetrizable case:
 ∂K may not be Borel;
 so need technical definition of support.

CHOQUET THEORY APPROXIMATION THEORY HYPERRIGIDITY DILATION ORDER APPLICATIONS

By Hahn-Banach and Riesz Representation Theorems, for $\varphi \in K$ there exists $\mu \in M_+(\overline{\partial K})$ representing measure $\varphi(f) = \int f d\mu$ for $f \in S$.

Choquet theory yields $\mu \in M_+(\partial K)$.

- important in applications
- nonmetrizable case:
 ∂K may not be Borel;
 so need technical definition of support.

DEFINITION

Choquet order: $\mu \prec_c \nu$ in $M_+(K)$ if $\int f d\mu \leq \int f d\nu$ for f convex.

This implies that $\int f \, d\mu = \int f \, d
u$ for $f \in \mathcal{S}$, so represent same arphi.

THEOREM (CHOQUET, MOKOBODSKI)

K metrizable. $\mu \in M_+(K)$ is maximal in $\prec_c \iff \operatorname{supp} \mu \subset \partial K$.

THEOREM (CHOQUET, MOKOBODSKI)

K metrizable. $\mu \in M_+(K)$ is maximal in $\prec_c \iff \operatorname{supp} \mu \subset \partial K$.

THEOREM (BISHOP-DE LEUUW)

K arbitrary. μ is maximal in $\prec_c \implies \mu(A) = 0$ if A Baire s.t. $A \cap \partial K = \emptyset$.

CHOQUET THEORY APPROXIMATION THEORY HYPERRIGIDITY DILATION ORDER APPLICATIONS

THEOREM (CHOQUET, MOKOBODSKI)

K metrizable. $\mu \in M_+(K)$ is maximal in $\prec_c \iff \operatorname{supp} \mu \subset \partial K$.

THEOREM (BISHOP-DE LEUUW)

K arbitrary. μ is maximal in $\prec_c \implies \mu(A) = 0$ if A Baire s.t. $A \cap \partial K = \emptyset$.

Mokobodski: this does not characterize maximality. However, if ∂K is closed, then μ is maximal \iff supp $\mu \subset \partial K$.

Classical result:

THEOREM (KOROVKIN)

 $\begin{array}{ll} \text{If } \Phi_n : \mathrm{C}[a,b] \to \mathrm{C}[a,b] & \text{positive maps s.t.} \\ & \lim_{n \to \infty} \Phi_n(f) = f & \text{for} & f \in \{1,x,x^2\}, \\ \text{then} & \lim_{n \to \infty} \Phi_n(f) = f & \text{for all } f \in \mathrm{C}[a,b]. \end{array}$

æ

→

Classical result:

THEOREM (KOROVKIN) If $\Phi_n : C[a, b] \to C[a, b]$ positive maps s.t. $\lim_{n \to \infty} \Phi_n(f) = f$ for $f \in \{1, x, x^2\}$, then $\lim_{n \to \infty} \Phi_n(f) = f$ for all $f \in C[a, b]$.

modern, significant improvement:

THEOREM (ARVESON)

If $\pi : C[a, b] \to \mathcal{B}(\mathcal{H}) \ast$ -repn., $\Phi_n : C[a, b] \to \mathcal{B}(\mathcal{H})$ (completely) positive maps s.t.

$$\lim_{n\to\infty}\Phi_n(f)=\pi(f)\quad \text{for}\quad f\in\{1,x,x^2\},$$

then $\lim_{n\to\infty} \Phi_n(f) = \pi(f)$ for all $f \in C[a, b]$.

DEFINITION

 $1 \in F \subset C(X)$ is a Korovkin set if $\Phi_n : C(X) \to C(X)$ are positive, $\lim_{n \to \infty} \Phi_n(f) = f$ for $f \in F \Longrightarrow \lim_{n \to \infty} \Phi_n(f) = f$ for $f \in C(X)$.

DEFINITION

$$1\in \mathcal{S}=\mathcal{S}^*\subset \mathfrak{A}=\mathrm{C}^*(\mathcal{S}).$$
 $\pi:\mathfrak{A}
ightarrow \mathcal{B}(\mathcal{H})$ *-repn.

 $\pi|_{\mathcal{S}}$ has unique extension property (u.e.p.)

if π is the unique u.c.p. extension to \mathfrak{A} .

THEOREM (ARVESON)

$$1 \in S = S^* \subset \mathfrak{A} = C^*(S)$$
. Then
S is hyperrigid $\iff \pi|_S$ has u.e.p. $\forall \pi \ast$ -repn.

DEFINITION

- π *-repn. of ${\mathfrak A}$ is a boundary representation for ${\mathcal S}$ if
- π is irreducible and $\pi|_{\mathcal{S}}$ has u.e.p.

3

- ∢ ∃ →

DEFINITION

 π *-repn. of ${\mathfrak A}$ is a boundary representation for ${\mathcal S}$ if

 π is irreducible and $\pi|_{\mathcal{S}}$ has u.e.p.

CONJECTURE (ARVESON)

S is hyperrigid \iff every irreducible *-repn. is a boundary repn.

DEFINITION

 π *-repn. of ${\mathfrak A}$ is a boundary representation for ${\mathcal S}$ if

 π is irreducible and $\pi|_{\mathcal{S}}$ has u.e.p.

CONJECTURE (ARVESON)

S is hyperrigid \iff every irreducible *-repn. is a boundary repn.

Remark

For $1 \in S = S^* \subset C(X)$, this asks if $\partial S = X$, is S is a strong Korovkin set in $C(\partial S)$?

DEFINITION

Dilation order: $\mu \prec_d \nu \in M_+(K)$ if there exist *-repns.

 $\pi: \mathcal{C}(\mathcal{K}) \to \mathcal{B}(\mathcal{H}), \quad \xi \in \mathcal{H}, \quad \langle \pi(f)\xi, \xi \rangle = \int f \, d\mu \quad \forall f \in \mathcal{C}(\mathcal{K})$

 $\sigma: \mathcal{C}(\mathcal{K}) \to \mathcal{B}(\mathcal{K}), \ \eta \in \mathcal{K}, \ \langle \pi(f)\eta, \eta \rangle = \int f \, d\nu \ \forall f \in \mathcal{C}(\mathcal{K})$

and isometry $J : \mathcal{H} \to \mathcal{K}$ s.t. $J\xi = \eta$ and $J^*\sigma(f)J = \pi(f) \ \forall f \in \mathcal{S}$.

DEFINITION

Dilation order: $\mu \prec_d \nu \in M_+(K)$ if there exist *-repns.

 $\pi: \mathrm{C}(\mathcal{K}) \to \mathcal{B}(\mathcal{H}), \ \xi \in \mathcal{H}, \ \langle \pi(f)\xi, \xi \rangle = \int f \, d\mu \ \forall f \in \mathrm{C}(\mathcal{K})$

 $\sigma: \mathrm{C}(\mathcal{K}) \to \mathcal{B}(\mathcal{K}), \ \eta \in \mathcal{K}, \ \langle \pi(f)\eta, \eta \rangle = \int f \, d\nu \ \forall f \in \mathrm{C}(\mathcal{K})$

and isometry $J : \mathcal{H} \to \mathcal{K}$ s.t. $J\xi = \eta$ and $J^*\sigma(f)J = \pi(f) \ \forall f \in \mathcal{S}$.

Theorem 1

Dilation order is the same as Choquet order.

DEFINITION

Dilation order: $\mu \prec_d \nu \in M_+(K)$ if there exist *-repns.

 $\pi: \mathcal{C}(K) \to \mathcal{B}(\mathcal{H}), \quad \xi \in \mathcal{H}, \quad \langle \pi(f)\xi, \xi \rangle = \int f \, d\mu \quad \forall f \in \mathcal{C}(K)$ $\sigma: \mathcal{C}(K) \to \mathcal{B}(\mathcal{K}), \quad \eta \in \mathcal{K}, \quad \langle \pi(f)\eta, \eta \rangle = \int f \, d\nu \quad \forall f \in \mathcal{C}(K)$

and isometry $J : \mathcal{H} \to \mathcal{K}$ s.t. $J\xi = \eta$ and $J^*\sigma(f)J = \pi(f) \ \forall f \in \mathcal{S}$.

Theorem 1

Dilation order is the same as Choquet order.
