Workshop on Nonlinear Functional Analysis and Its Applications

in memory of Professor Ronald E. Bruck

April 4-6, 2022

Technion - Israel Institute of Technology, Haifa, Israel

Nonlinear Fractional Differential Equations

Juan J. Nieto

CITMAga, USC, Spain

Abstract

In this talk, we will present some general aspects of fractional calculus and nonlinear differential equations of fractional order. We use, as a representative example, the fractional logistic differential equation.

We then comment some mathematical models using fractional derivatives including compartmental fractional models of the COVID-19 pandemic.
